

Turning on Dev Mode on an Android Device

In order to run the app on a real Android device, you need to turn on Development mode on that device.

Doing that is super simple!

A detailed instruction with pictures can be found here: <https://www.howtogeek.com/129728/how-to-access-the-developer-options-menu-and-enable-usb-debugging-on-android-4.2/>

Here are the steps you need to execute:

- 1) Access the system settings on your phone
- 2) Open "About Phone"
- 3) Find the "Build Number" and tap it a couple of times. After some taps, you should see a message "You are now X taps away from becoming a developer". Keep on tapping until it confirms that you unlocked developer mode.
- 4) Open the, newly added, "Developer" options in your device system settings
- 5) Turn on "USB Debugging"
- 6) Allow your computer to access your phone once you connected both and get prompted
