

## Fixing the “adb not found” error

You might get the error “adb not found” when trying to run the app on an Android simulator or device.

adb stands for “Android Debug Bridge” (<https://developer.android.com/studio/command-line/adb.html>) and you may need to manually add it to your system PATH variable to ensure that you can run the command from anywhere on your system.

### Windows

Please check the following thread to find detailed instructions on how to add adb as a globally available command: <https://stackoverflow.com/questions/20564514/adb-is-not-recognized-as-an-internal-or-external-command-operable-program-or>

### Mac/ Linux
